Enguerrand LE NILIOT

Machine Learning & Data Science | 6-month internship from January 2027
Seoul, South Korea | enguerrand.leniliot@gmail.com | +82 10-9572-3715
linkedin.com/in/enguerrand-le-niliot | github.com/EnguerrandLN | enguerrand-leniliot.com

Education

Seoul National University (SNU) — Seoul, South Korea
Academic exchange, graduate courses — Sep 2026 - Dec 2026

- **Courses:** Probabilistic Graphical Models, LLM Applications (RAG, agents), Random Signal Theory, Computational Mathematics.

Télécom Paris, Institut Polytechnique de Paris — Paris, France
MSc in Engineering (Diplôme d'ingénieur) — Sep 2024 - Jun 2027 (expected)

- **Tracks:** MACS (stochastic modelling, scientific computing) and IMA (computer vision), Data Science specialization.
- **Coursework:** statistical learning, high-dimensional probability, optimization, deep learning for vision, time series.

Lycée Thiers, CPGE MPSI / MP* — Marseille, France
Preparation for the Grandes Écoles entrance exams (mathematics, physics) — Sep 2021 - Jun 2024

Projects and Competitions

Rakuten France: Multimodal Product Classification — *ENS Challenge Data, 2026*
1st of 135 on the public leaderboard, weighted F1 0.9346 — code on request (challenge open)

- Classified 99k French product listings into 27 classes from text and images (official text benchmark: 0.811).
- Stacking pipeline on a shared 5-fold split (TF-IDF linear models, logistic regression and gradient boosting meta-model), plus features from an analysis of how the catalogue was assembled.

HrFlow.ai: Next-Job Recommendation from Browsing Sessions — *ENS Challenge Data, 2026*
1st of 69 on the public leaderboard, score 0.7354 — code on request (challenge open)

- Predicted the next job ads a candidate opens (MRR@10) and their next action from anonymous sessions.
- Two-stage recommender (co-visitation and Session-kNN candidates, LightGBM learning to rank on 80 features), fused with a classifier modelling how sessions were built (AUC 0.990).

RoboWorld 2026: Language-Conditioned Visual Navigation — *NeurIPS 2026 RoboPAD workshop challenge*
2nd on the phase 1 leaderboard, score 53.8 (baseline 20.4) — leaderboard

- Predict a robot's full action sequence from one egocentric image and a language instruction.
- PyTorch transformer fusing pretrained vision and text encoders, predicting 12 anchored trajectory hypotheses decoded by minimum Bayes risk on the official metric.

Other projects: QRT asset allocation returns (39th of 1,702); League of Legends draft model on 150k matches (54.4% accuracy); white blood cell classification (5th of 77).

Technical Skills

Programming: Python, SQL.
Libraries: PyTorch, scikit-learn, LightGBM, Hugging Face Transformers, pandas, NumPy, SciPy.
Methods: gradient boosting, learning to rank, recommender systems, deep learning, NLP, computer vision, time series.
Mathematics: stochastic calculus, probability and statistics, Monte Carlo methods, optimization.
Tools: Git, Linux, Jupyter, LaTeX.

Leadership

President, Gaming Club, Télécom Paris — Sep 2025 - Jun 2026

- Organized an inter-school LAN tournament with a 3,000 EUR prize pool: budget, sponsors and logistics.

Treasurer, Salon du Terroir, Télécom Paris — Sep 2025 - Jun 2026

- Managed the finances and logistics of a student fair with over 1,000 visitors.

Languages and Interests

Languages: French (native), English (C1, Linguaskill), Japanese (A2, elementary).
Interests: esports (president of the school gaming club), game jams (Global Game Jam 2025), scuba diving (certified diver), travel in East Asia.
